
Results of exams in zero

Posted by sorozco - 2019/12/17 19:34

Hello, I installed the qriquiz plugin, and I am using it displaying the exam using it on a menu option where i configured the call to the exam.

The result of the questions is saved and can be viewed on the detail of the exams, but all the quizzes results appear with zero, and zero percent.

Same with the results template of passed and failed. I am using the fields `Â { $UserScore }` and `Â { $MaxScore }` and both appear as zero in the template when the user passes or fails the exam.

We are using joomla 3.9.13 and the last version of ariquiz, and PHP 7.2.25.

Sorry! I found the problem. Value of each question should be configured, I forgot that!

Thank you
