
Use pattern multiple freetext question in MathJax

Posted by stepan39 - 2019/12/25 06:04

Hi!

I often use the questiontype "multiplefreetextquestion" and it works just fine.

My task now is to make complex questions based on mathematical formulas using the MathJax library. The simplest question is <http://joxi.ru/DrlzxJxCVY5YX2>

Writing an MathJax Expression:

$\left(\begin{cases} x= \\ y= \end{cases} \right)$

and get <http://joxi.ru/eAOe8g8u90Q01m>

Then we connect the expressions and as a pattern.

Fiasko <http://joxi.ru/RmzYjdjFYqQpkr>

Tell me how you can embed pattern in MathJax code, are there any solutions?

Thanks.

Hello,

Sorry, but it is not possible to mix MathJax expression with HTML code. A possible solution is split expression into several parts and insert HTML code between these parts.

Regards,
ARI Soft

Very sorry... :(
Thanks for the quick response!
