
Different behavior on similar quizzes

Posted by vincentllora - 2020/05/19 01:03

I made 2 similar quizzes on separate pages, but they are not behaving the same. The first continues to have the user input their name and email without having to click a 'continue' button, but the second requires the user to click a green 'continue' button after the last quiz question is answered. I prefer the behavior of the first, having less clicks for the user, in hopes they get to the point that they submit their name and email. How can I replicate the behavior of the first to the second?

first:

Hello,

Open "Settings" tab on quiz settings page and uncheck "Multi pages -> User 'Continue' button to navigate to the next page" checkbox.

Regards,

ARI Soft
