Name and email fields

Posted by Nata - 2020/08/13 09:22

_____

Hello,

Help me please with one question. When user is taking the quiz (Anonymous acces - NO) he needs to fill name + email. But when user is logged these fields complete automatically with info from hes profile. I need to logged user write name and email manually. How can i disable this autofill function, or what file response to this function and i will modify him.

And one more question, these fields (name + mail) is saving last user info. Guest finished the quiz, and if from his PC someone wants to start the quiz, on these fields will be name + mail, from last user who completed test. Can i disable this cache, or what is it?

Your component is awesome!!! :woohoo: :woohoo:
Thanks.

P.S. Sorry for my english https://www.ari-soft.com/images/fbfiles/images/fields.png

Hello,

The component doesn't show the form for logged users (when they registered and login on your site). It is only shown for guest users and it can pre-fill if this guest user filled out the form for another quiz or quiz session.

Regards,
ARI Soft
