How to show wrong questions from finished quizzes

Posted by blues - 2020/09/21 07:32

_____

Hi Team

Any way through datatables or ari quiz component or anything others can show wrong-answer questions from the finished quizzes to a user? eg. I just need to review the questions I made wrong answer, when I login, I can see which items I made mistake and learn from them.

Thanks

I'm also using this component and there is no any way to see wrong answers after you close quiz result.

You can only see your correct or incorrect answers with explanation right after you complete the quiz.

In order to see correct or incorrect answer you need to change setting of the quiz.

In quiz setting there is a tab "Result Setting", you can change seetings.

Yeah, Thanks for your suggestions Erenya. Not sure if the development team have any idea on collecting wrong answer questions across quizzes.

_____

If you want to show only wrong questions at the end of quiz, open "Results settings" tab on quiz settings page and select "Only wrong answers" option in "Successful results" and "Failed results" drop-downs.

_____

ARI Quiz is the most powerful quiz component in Joomla extensions, it's a pity to stop developing further...

_____

Guys, currently we don't implement new features for the extension because our main goal now is creating new quiz plugin for WordPress and then adapt it for Joomla! system. After this will add new features.

Regards,
ARI Soft
