## ARI Quiz Joomla 4?

Posted by Bazyl - 2020/09/29 11:47

Good morning

I have a few questions:

- Is the component being developed?
- Does it work in Joomla 4?
- Does it work in php 7?
- What is the latest version number? Found 3.7.0

Thanks for reply

1. Works fine for me on php 7.4
  2. Latest available version 3.9.19

I subscribe to the question. The long-promised version of Ari Quiz v.4. \*. was never released. The current version contains a lot of unnecessary code (for example, support for older versions of Joomla) and does not support Bootstrap 4 and 5

I checked the component for compatibility.  
Php v. 8.0.2 - does not work  
Joomla !, 4.0.0-beta7 - not working

Very strange behavior of AriQuiz developers. Why can't you just answer yes or no ...  
If the project is actually closed, then you can directly declare this.  
If you are developing on Joomla 4, then you shouldn't hide it either.  
Now there is complete silence and ignorance of users.

Hello,

Sorry for the delay. Currently we are not working on Joomla! 4.x support. We are working on new version of quiz plugin for WordPress. After this we will create a new version for Joomla!

If you update ari-quiz for joomla 4 it would be very nice.  
Now with joomla 3.10 it is in block

I had an email reply to this question last week and at this time there is no timeframe. They are working on a Wordpress quiz plugin and once that is done, they will look at J4 version.

It's a real shame there isn't any timeframe at all, because that doesn't make me feel confident to wait, in case they

---

decide not to create one after all. I'm actively looking at alternatives now, which is sad, because I've been using ARI for years and this it's an excellent extension

I gladly post quizzes on the site.  
The update from joomla 3 to joomla 4 is much appreciated.  
Then I would pay it again without problems, let's call it a deluxe version.

There is only Simple quiz as a very simple alternative in Joomla 4.x

It will please many with a Ari Quizz update, many sites will remove php 7.3 at the end of the year and only use php 8.  
A time frame will be really good. :unsure:

Anyway, can you provide an update on a Joomla 4 version of ARI Quiz?

Support for Joomla 3.9 finishes in August 23.

Unfortunately this seems to be the case. I have been holding off updating my site for AriQ to get to J4, but I can see now that it's pointless. As of today I will be looking at replacing AQ for the J4 site, which is sorely overdue now. I have been using AQ for around 7yrs now and it's sad to see it just die like this, but must move on now as the developers obviously have more interesting things to work on.

yeah, i thought the same 2 years ago and started developing a J3 subsite, then held back in hope because i didn't want to do it and then have to migrate to J4.

Don't hold your breath you will be waiting a long time. If it were even a twinkle in the eye of the developers they would be all over this thread etc.. making sure nobody jumped ship.

Also, unless I am missing it, AriQuiz isn't even listed on their product pages anymore?.... again, maybe Im wrong.

Good morning

I upgraded ari quiz from a joomla 3.10 version, so the site crashed.

I installed ari quiz in joomla 4 and then moved the database that was updated.

Everything ok, only that some quizzes give error :

1264 Out of range value for column 'UserScore' at row 1

How can I fix?

Thank you

I have installed Joomla 4 together with ARI Quiz Version 3.10.1. When trying to show a single quiz or quizzes with the same category, I get an fatal error

---

Sorry, there was a problem we could not recover from. The server returned a "500 - Whoops, looks like something went wrong."

Fatal error: Declaration of AriQuizSubViewQuizFormGuestForm::display(\$quiz, \$tpl = null) must be compatible with Joomla\CMS\MVC\View\HtmlView::display(\$tpl = null) in /home/httpd/vhosts/spirit-at-pm.ch/pmppprep.spirit-at-pm.ch/components/com\_ariquiz/views/quizform/guestform/view.html.php on line 19

it seems it does not happen with all quizzes

See examples on pmppprep.spirit-at-pm.ch; two quizzes: one works, the other crashes

Any ideas?

Thank you

I discovered that the score was zero in the questions, I corrected it and the quiz now works.  
Unfortunately other quizzes give errors and I find that they have missing values, I can't remember if it was me who didn't write them down.  
But the quiz has always had that mistake.

The error appears if I click on the quiz, go down and click the save button, without entering answers.  
Except that the browser then stores the error page and doesn't show me the quiz list.

I don't know if it's the hosting cache that litespeed uses, many quizzes work fine, a small percentage give me that error.

I don't know if it's the hosting cache that litespeed uses, many quizzes work fine, a small percentage give me that error.

The steps I take are, I click the quiz, I go down without putting the answers, I click save. It is set to show correct answers, but gives errors.

I removed url sef but the problem remained
