Hi team,

I have configured the question count for a quiz, but it still shows all the questions, anything I missed or this parameter has different use case? I have a test with total 11 questions, I set the question count with 5, but the front end still showing 11 questions.

what does the question count here mean?

thanks <http://www.ari-soft.com/images/fbfiles/images/quesitoncount.PNG>

Hello,

Complete the previous quiz session and start a new one.
