## Suggestion about how to show wrong answers after t

Posted by rgeist - 2021/03/03 07:52

---

In a quiz we have the following Results setting: (see image1). What I would expect now, is a view, similar to the view of the admin (see image2). But what I get is image 3. How to configure to get a view like image 2 for the user? I tried half a day, but could not find it. <https://www.ari-soft.com/images/fbfiles/files/images-0c02a627ee40f3f084b4657c691ff776.zip>

Hello,

If "Detailed results" is set to "Always" in quiz settings then questions with answers should be shown for quiz takers. If it doesn't work, could you provide a link to a quiz and a temporary access to your J! backend by email so we can investigate the problem?

Regards,  
ARI Soft
