## Ari quiz error

Hi,

I have noticed that even when Ari quiz is working fine on my site it is still throwing a lot of PHP errors.  
Is there anything I can do to stop them?

Hello,

These are not errors, these are warnings. It is possible to set log level in PHP settings (for example log only errors).  
BTW, we are going to update the extension and avoid these warnings in a future version of the component.
