
Data file size

Posted by Kim Tabori - 2021/05/14 15:24

Hello Ari,

As I am migrating to Kajabi but still using amazing Ari I have had to make a copy of all my quizzes thereby doubling my number of quizzes in Ari. My website has been very slow lately and I was wondering if this was due to the doubled quizzes in the Ari data file (I have a large number of quizzes)

Many thanks Kim

Hello,

The extension stores data in a database (MySQL) and it can handle huge amount of data quickly (if tables structure is optimised).

MySQL supports ability to enable slow queries log. For example you can read here how to do it for cPanel. Ask you site/server administrator to enable it and then share slow queries with us so we can investigate the problem deeply.

Regards,
ARI Soft
