## Bulk Exporting User Results with Answers

---

I would like to find out if there is a way to export all results (with answers) of a user. Currently, I can view a user's detailed results through the "Quizzes Results" section. It's becoming hectic because I have to click the "View" button for each and every quiz and there are over 100 quizzes, each belonging to a different topic. If there is a way to select a number of quizzes (or all the quizzes) and when I click "View" it should show you the quiz results and answers of the currently selected user, that can be a huge lifesaver.

You implemented a perfect way to export bulk results to different formats (CSV, Word, HTML, and Excel). This exports results for all selected quizzes. If it is possible to add the user's answers to this, then it can be very convenient for people like me.

Is there a way you can help me quickly resolve this?

Your help is greatly appreciated.

Thanks guys
