## Problem with question type

Posted by Claude\_Troncy - 2010/09/03 10:16

---

Bonjour,

When changing the type question from single to multiple, the question disappear... and trying to correct the problem sometimes corrupt the entire quiz ( message... loading please wait)

No problem when changing a question from multiple to single.

Regards

Claude

Hello,

We can't reproduce this issue, could you explain how to reproduce it? Question disappear on backend or on frontend only? It happens with all single questions or it requires create specific single question?

Bonjour,

I made the test again this morning and now it is working... why was it not yesterday evening ?? the mystery of computer. So sorry.

I have some other questions...

Whatever I type in a free text question the answer is always seen as correct when I ask to show the correct answer.

Is it possible to exit the quizz without saving it ? ( As I want to come back to the current question)  
Is there a way to reload the quizz as blank without finishing it.

And how to know all the future developments on ARI quiz and an rough idea of their disponibility (I am thinking for example of the future D&D correlation... multi column in a question).

Your product is very good and the integration in an article a real plus.  
Regards

Claude

Hello,

The component continues the previous quiz session until the user finishes it. About road map, currently we are finishing paging for quizzes after this we are going to release v. 3.0.0 of the component and then we'll implement features which you described.

Bonjour,  
Thank you very much for your answer

Another thing if possible... It will be fine to have a dummy question just to give the possibility to display some images, some citations, some clues between each question.

Regards  
Claude
