
Quiz submission and evaluation method

Posted by pragati - 2010/09/06 06:10

I have a 200 question quiz of single choice questions. I would like to add following functionality to the quiz

- user being able to mark a question for review and come back to it later
- User being able to review all marked questions or all questions before submission
- After submission I want to provide online feedback for every question. User can visit each incorrect question, see the question and reasoning for correct answer. Alternatively user can go through all questions and explanations.

Is it possible to create such a test using AriQuiz? If yes, pls point me to appropriate tutorial.

Regards,
Pragati.

Hello,

1 and 2. Currently the component doesn't provide this ability, a user can click 'Skip' button and return to skipped question later.

3. The component can display explanation from 'Note' filed from question settings at the quiz final page when 'Show Full Statistics' option is enabled or the component can display explanation after submit a question.

Regards,
ARI Soft

Thanks!

Probably this can be a feature request. Most real life tests are 2+ hours and 150+ questions. It is hard to navigate them sequentially.
