
old version to new export

Posted by munchman - 2024/03/15 21:50

Hi, my old site J2.5 Ariquiz 3.5.2 has thousands of questions. I have the latest version of AriQ on my new J5 site. Is it easy enough to export the questions etc. Im guessing as a minimum I need to replicate categories in the new site before importing or will the import create the required fields?

ALSO: Related question (or perhaps even part of the answer):

I think I saw reference to copying all of the dB tables from one site to another, BUT this raises a few questions as I am a noob with moving dB entries:

1. As my old site is so old (J2.5) , will the dB entries be irrelevant/work on the new J5 site?

1. The dB entries on my old site starts with ecvpg_ariquiz....etc but my new site mxj30_ariquiz...etc - do I have to change anything before/when/if i import?

Any advice appreciated as I would like to avoid mistakes and make as much of the process as easy as possible.

TIA

=====

Hello,

You can upgrade the component to the latest version one J! 2.5 site (we recommend to create a backup before upgading) and then copy DB tables with prefix #__ariquiz to J5 site (just change the table prefix to the correct one). After this install the extension on J! 5 site.

Regards,
ARI Soft

Hi, thanks...the old J2.5 site is still active while I develop the J5 site - if I upgrade the component in the J2.5 site will it effect the functionality? TIA

It should work, but create a backup before upgrade.

Regards,
ARI Soft

I already installed the latest AriQuiz on the new site - do I have to remove before?

=====

Re:old version to new export

Posted by munchman - 2024/03/19 09:24

Am I backing up the DB, the component or the site? - sorry Ive never done this before so I need to be careful, thanks

You can use Akeeba Backup extension to create site backup.

Remove the extension if it doesn't contain any data otherwise you can't restore DB data.

Re:old version to new export

Posted by admin - 2024/03/31 11:40

Hello,

It seems the extension was updated incorrectly. v. 3.10.x is compatible with PHP 7/8 and doesn't generate such errors.

Regards,
ARI Soft

Re:old version to new export

Posted by munchman - 2024/03/31 17:49

Hi, when you say incorrectly, is there a set process? I thought I was just installing extension over the old one? Is it a PHP version issue do you think?

=====

Re:old version to new export

Posted by admin - 2024/04/02 10:19

What version of the extension is installed now? We can investigate the problem if you can provide an access to your J! backend by email.

Regards,
ARI Soft

Re:old version to new export

Posted by munchman - 2024/04/02 11:53

Hi, AriQ V3.5.2 with PHP 5.6 - I can update the php but will break site temporarily. I have a backup so can revert site really easily once ive exported the DB tables

My intention is to try and move AriQ questions to a new J5 site (currently in sub folder) etc with minimum fuss.

=====

Re:old version to new export

Posted by admin - 2024/04/03 06:46

You can avoid update of the extension on J! 2.5 site. Just copy the related DB tables from J! 2.5 site to J! 5 database (make sure a proper DB table prefix is used for the tables) and after this install the latest version of "ARI Quiz" extension on J! 5 site.

Regards,
ARI Soft

Re:old version to new export

Posted by munchman007 - 2024/04/06 05:03

Hi, just double checking - the very first response to this query told me I had to upgrade the old j2.5 sites AriQ to latest before copying the db tables to the new J5 site - if that isnt the case i will be pleased but can you confirm as there is conflicting advice.

many thanks

=====

Re:old version to new export

Posted by admin - 2024/04/06 09:36

The both cases are valid. The extension can be upgrade on J! 2.5 site and then copy DB tables to J! 5 site and install the extension or copy current DB tables from J! 2.5 site and then install the latest extension version on J! 5.

Regard,
ARI Soft
