
Pb ari quiz CB Plugin - user points compatibility

Posted by Duchateau - 2024/07/01 19:56

Hi,

2 questions :

- Ari Quiz is now running well with my joomla 4. I created some quizzes, installed and activated the Community Builder plugin. However, cb users can't see their results, the list is empty.
What can be wrong ?

- Altauserpoints seems not working with joomla 4. User points replaces it (repositorio.com) but is with paid download.
Before i get it, can you tell me if ari quiz and its plugin are compatible with this version of user points ?

Thanks

D.Duchateau

Hello,

1. We will check CB integration.
2. Unfortunately we haven't tested the existing AUP plugin with repositorio.

Regards,
ARI Soft

Hello,

- I created FR files.ini for the component. It works fine for the quizzes on front end, but it seems that it was the reason why the results don't appear. When I erase these files, results now reappear ... What could be the reason ?

- For user points, I'm in contact with the creator who writes a new plugin :)

Thanks a lot for your help.

Damien

Do you mean CB plugin is not working with custom INI file(s) and work without them?
