
Transfer ARI Quiz to new Joomla

Posted by moldow - 2024/09/06 11:30

Hi, I have been tasked to migrate from the old version of Joomla (2.5.28) the entire ARI Quiz module with its settings and previous answers to the new version of Joomla (5.1).

I would like to ask what procedure would you recommend and if it is possible at all. First I need to upload the latest version of ARI Quiz to the new version of Joomla and then somehow import the settings there?

Please help.

Hello,

You can install the latest "ARI Quiz" version and then upgrade Joomla!

We are strongly recommend to create a backup before component and Joomla! upgrade.

Regards,
ARI Soft

So does he suggest the following course of action?

- update ARI Quiz to the latest version
 - then update Joomla from version 2.5.28 to 5.1
 - and then what will be the next step? (I need to export the whole ARI Quiz to a completely different Joomla site)

If you want to copy all quizzes data then copy all DB tables with #__ariquiz prefix from old to a new site. Check that the correct DB prefix will be used for new site.

I have a bit of a problem, I can't do any updates on the old version of Joomla, either Joomla itself or the extensions.

Questions:

- 1.) How can I download the latest ARI Quiz?
- 2.) Where can I find the license key in the old Joomla to be able to put it into this new one?

Sorry if I'm asking stupid questions, but I don't have any experience with this extensions.

Hello,

The latest version of the extension and API key are available in "Member Area" on our site.

Regards,
ARI Soft
