
What could cause this \"error in our error log?

Posted by niki - 2010/10/01 19:39

File does not exist: /home/oursite/public_html/administrator/components/com_4rss/assets/icons, referer:
http://oursite.com/administrator/index2.php?option=com_ariquiz&task=results&quizId=3

File does not exist: /home/oursite/public_html/404.shtml, referer:
http://oursite.com/administrator/index2.php?option=com_ariquiz&task=results&quizId=3

This error seems to suggest ari-quiz is referring something (in the administrator area). When I paste the above referrer link in, it takes me to one particular users exam results. The page comes up though, it does not show error 404.

Does "Referrer" mean that this ari-quiz page is trying to pull up something else that is not there such as "com_4rss" in the first example and that something in "com_4rss" is missing?

Hello,

Sorry for delay. The component doesn't work with 'com_4rss' component. This error can cause any additional plugin for Joomla! backend, check please contains error log similar error for another extension or not?

Regards,
ARI Soft
