## Question categories and license

Posted by Meidini - 2010/10/03 03:50

---

Hello,

I have purchased Ari Quiz, but then I have several questions:

1. How to show question categories of the questions to the test takers?
2. I see that my production license only valid for 1 year and for 1 domain only. Do you have any bundling package so I can have an unlimited production license and/or for unlimited domains?
3. what is "Parse Plugin Tag".. I see that there is an explanation for this "if this option is on then mambot (plugin)...", but still I do not understand what does it mean in plain english.. => sorry.. Can you please explain?
4. what is lag time?

Your prompt response on these is very much appreciated!

Thank you so much!

Meidi

Hello,

Regarding your questions:

1. Could you explain where you want to display it? The component shows quiz categories at the end of a quiz when 'Show Full Statistics' is enabled.
2. After a year the component will work without any problem, but you can't get any updates of the component. You can read about license keys in our F.A.Q. see section 4. We are going to release the component under GNU GPL license soon and we'll remove domain based license. Currently if you need additional license contact us by email and we'll resolve this question.
3. By default Joomla! runs content plugins only in articles (for example AllVideos plugin), but if this option is enabled you can use content plugins in question text (for example embed video or audio with help AllVideos plugin).
4. This is time limit after which a user can take quiz again. For example if this option is set to '7200' for a quiz and a user finishes the quiz, s/he can take it again only after 2 hours.

Regards,

ARI Soft

Halo,

Thank you for your response below.

I want to display it before the question appears. Ideally, the question category name will appear before the questions in the category show. But if it is not possible, maybe the question category of the question can appear when each question shows.

Can I do that?

---

Thank you!

Sorry, but currently the component doesn't provide this ability, but you can submit feature request [here](#) and we'll implement this ability in a future release.
