## Customizing the Finished Quiz page

Posted by timchesonis - 2009/01/08 15:06

---

When the user finishes the quiz, they are brought to a blank page. What template do we modify for display at the completion of the quiz?

Our users must be logged in to take the test, but we send them the link to take the test via e-mail. Thank you for your time and consideration.

Most probably you have not set up appropriate templates in quiz settings. Please check this.

If you use Result Scale feature appropriate template should be set up for this result scale and this result scale should be selected in quiz settings.

Thank you for your prompt reply. I do not use "Result Scale". Would you please tell me which menu item I am to click on in order to create the "template" that will be displayed at the conclusion of the quiz?

Please go to Components -> ARI Quiz -> Quizzes -> Select quiz.

Set Successful Template and Failed Template as appropriate.

You can edit/create new templates in Components -> ARI Quiz -> Text Templates.
