
Random Selection ?

Posted by bijumk - 2010/11/23 17:47

I added about 1500 questions to my first quiz.. and for taking exam, I selected 10 questions each time for the quiz taker. But the problem is some questions repeats most of the times, and some others are not getting displayed at all..

I feel the quiz selects 90% of the questions from the first 300-400 questions, and only 10%from the rest 1500 questions.

Is there any chance for it ?

The component uses standard PHP and MySQL functions for randomize questions. If now it gets more questions from one range, it will take questions from another range next time.
