## Setting up the paginator

Posted by maurizionano - 2011/12/23 10:08

---

hi,

I'm trying to setup the paginator on my joomla 1.7 site, but when I select the article parameter in the user interface and click save these parameters disappear immediatly.

Is it possible to have a clear explanation of the setup processes?

Thanks in advance  
Maurizio Nano

Hello,

Check that "System - ARI Extensions" plugin is installed and enabled. This fact is described in readme.txt file from extension's archive.

Hi,

system - ari ext enabled  
content - ari paginator enabled  
ari paginator module enabled

now the parameters remain in the interface, BUT I'm not able to see anything in the website. Is it relative to the plugin/module position?

thanks  
maurizio nano

Could you provide a link to a page where you try to use the module and screenshot(s) of module settings page by email?
