
Just installed and a few questions

Posted by wpompenkcp - 2013/01/03 16:21

Hi guys,
I've just bought this module and got a few questions:
Is this module (going to be) compatible with K2?
What position should I use?
I'm trying to get it to work in combination with pages generated by joodb
If both answers are "no" I would prefer a refund, is this possible?

Thanks!
William

Hello,

The module shows Joomla! articles. If you want to embed the module into K2 articles, you can use "Modules Anywhere" or "Module Plant" plugin. They support ability to embed Joomla! modules into any content.

Hi :-)

K2 isn't my first concern.
I installed this module because Joomla has a default of 10 articles per page.
After searching without result for a working solution to modify the limit to 15 I decided to try an extension, also the "better" look promised worth the while.
Can you help me to get it to work in combination with joodb?
At this moment this part of our website is hidden, I can send the credentials?

edit: By compatible with K2 I meant if it was possible to use K2 content, the other way around :-)

Thanks!

Currently the module can show only Joomla! articles. It doesn't work with K2 items.
