
Image in ARI Paginator

Posted by Matias - 2010/07/28 01:22

Hello,

I've just bought ARI Paginator and wanted to know if it's possible to separate article images from article content so that I can show the image in the module.

What I'd like is to show in the ARI Paginator module:

- Image
- Create Date
- Title

Is it possible to do this?

I've seen this organization in the ARI Paginator Demo, how you do it?

Thank you very much!

Best regards,
Matias

Hello,

What image you mean? Is it the first image in an article?

Regards,
ARI Soft

Hello.

Yes, that's right, I'd like to show the first image in an article.

In the ARI Paginator demo (<http://www.demo2.ari-soft.com/joomla-articles-pager.html>), there's text together with an image that's align to the left.

How you do that? Is it possible to separate image from text in Paginator? Or the article is designed in that way and Paginator only loads article?

Thank you!

Regards,
Matias

On our demo site is used article with formatted text and image. We can add new predefined variables to the module. For

the first image, for text only and for text without the first image. Is it suitable?

Regards,
ARI Soft
