conditional \"read more\" link

Posted by JPR - 2011/06/06 20:05

_____

Hi forum,

hope you can help me with this problem.

I use the Easy Slider to show a mix of very short messages (>> need no read more link) and rather big articles with photos and text (>> so yes, needing a read more link).

In my current setup I use:
{$introtext}
Read more..."

Is there a possibility to show only the read more link if there is an "" included in the article?

Big thanks,
JPR

_____

Hello,

It is not possible to use conditional expression, but we can add custom predefined variable which will contain HTML hyperlink if article contains intro text and full text. Is it suitable for you?

Regards,
ARI Soft

_____

Yes, that would be great!
Cheers,
Jens

Hi,

I'm very interested in this function too. I've purchased the module yesterday. Thanks!

Hey there!
Having the same wish on my list :)
The module is great und i'm happy to have it!

This feature would make it perfect.
Could you send me the update too, please!

Best regards!

Re:conditional \"read more\" link

_____

Send it to me too.

I have the first column I will link to articles elsewhere in my site. That's the only thing I'm missing. I think I need the articler ID.

_____

This post about "ARI Easy Slider" module, not about "ARI Smart Content". Could you describe in more details what plugin from "ARI Smart Content" package you use and what do you want to achieve?

Regards,
ARI Soft
