
Positioning controls

Posted by jgribble - 2013/03/01 04:44

I just love this module and use it on all our sites. New client wants to display controls. They go out to the edge of page and aren't easy to see. I would like to add some padding to bring them more to the middle. And possibly style the text. Can you direct me to the right file? It appears to be "base.css." I am attaching screen shot.

Hello,

The module uses \modules\mod_arieasyslider\includes\js\themes\base.css CSS file for "default" theme.

Regards,
ARI Soft
