# Small glitch when looping from last to first image
Posted by daham11 - 2013/06/04 19:14
_____

I'm currently using ARI Easy Slider on a website homepage (www.luvlybugs.com). There are currently three images in the slider and I have it set to continuously loop through the images. When it comes time to go from the last image to the first image, the image before the last image appears briefly then immediately jumps to the first image. I'm not sure what may be causing this, any suggestions?

_____

Hello,

You use old version of the extension (v. 1.3.5), but the latest version is 1.7.3. Upgrade the module to the latest version and clean browser's cache.

Regards,
ARI Soft
