constant height in responsive container

Posted by jmgroud - 2016/03/03 11:24

_____

Hello

I have a set of images of different sizes.

I place the module "ARI Smart Content - Easy Slider" in a container responsive. This container can thus change the size, length and width.

I would like to have the slideshow with respect to the height of the container (100% of the container).
The width can vary according to the size of the images but keep the proportions.

Currently, the parameters are:
- Width: 230
- Height: 300
- Responsive: Yes

result:
The height and width of the slide remains the same and some images are not displayed completely.
I would like to have : resize the images, leaving the clear width and keeping the fixed height

I can't find the right settings...
Can you help me ?
Thanks a lot.

Jean-Marie

_____

Hello,

Could you provide a link to a page where the problem occurs?

Regards,
ARI Soft

_____

Do you mean "ARI Smart Content - Nivo Slider" or "ARI Smart Content - Easy Slider"? The page contains only "ARI Smart Content - Nivo Slider".

_____

OH EXCUSE ME BUT I DON'T USE "Easy Slider" but "Nivo Slider"...
So, it's the bad category in the Forum...
 :(

_____

But... My question is the same with 'Nivo Slider'
 :)

_____

It seems "Responsive" parameter is set to "No" so the slider has the fixed width and height.

_____

Hello

I set now the parameter "responsive" to "Yes" (Width=100 and height=200).
The images in the slideshow are exemples with differents sizes.

==> the width is constant
==> the height is not constant
 :(

I would like to have the opposite... :)

You can see the exemple here : http://pp.jmgi.fr
Yout must be connected to see this exemple : login/passw = tests/ari5522

for you, the title on the page is "MODULE - ARI SMART CONTENT - NIVO SLIDER"

Merci

_____

When responsive is enabled, the slider has a flexible width (depends on width of container, value of "Width" parameter will be used as a maximum width). Height will be calculated automatically, saving images aspect ratio and depends on current slider width.

Regards,
ARI Soft

_____

You say : "When responsive is enabled, the slider has a flexible width"

Apparently not... the slider has allways the same width...

- When i set 100 in the field "Width", all images are displayed with a width of 100 and the heights change with diffÃƒÂ©rents images
- When i set 200 in the field "Width", all images are displayed with a width of 200 and the heights change with diffÃƒÂ©rents images

I would like to have the opposite...
Allways the same height

Thanks

The original message was:

the slider has a flexible width (depends on width of container, value of "Width" parameter will be used as a maximum width).

Value of "Width" parameter is used as a maximum width for the slider. In your case, width of container where the slider is located more than values of "Width" parameter which you use so width of the slider is equal to value of "Width" parameter.

_____

The value "100%" is accepted in the entry field "width".
It's good yes of course it's a real good idea from ARI but...

But the height is calculated based on the size and proportions of the displayed image...
So the height is changing...

I would only have the height indicated in the "High" setting without any change
The width can change of course, with the limit of 100% in the container of course.

IT's very difficult for me to explain because i'm french... I feel that you do not understand my request
Maybe it's simply not possible with your plugin... :(

Can you see the document here (file join with this post) ?
I try to explain with pictures what i want...
 :)

Is this possible to have this result ?

Thanks a lot
