Causing error 500!

Posted by INIC - 2019/05/02 18:20

_____

ISSUE: Host claims Ari-Easy-Slider caused error 500 that disabled the site.

Host states:
--+
 PHP Deprecated: Non-static method AriKernel::instance() should not be called statically
--+

I have temporarily blocked the plugin and now your website loads fine.

Here is how I temporarily blocked your arieasyslider plugin. The plugin directory
/home/domainname/public_html/plugins/content/arieasyslider/ has been renamed to
/home/domainname/public_html/plugins/content/arieasyslider_old/.

I have opened a email to you with your access to the site.
