
Filter for csv-Files and iclude in content

Posted by stkurs - 2011/01/13 11:58

Hallo, i have two questions:

1. when i copy (clipboard) {aridatatables moduleId=""} in my content and write moduleID the correct nummer (65) then i got an Server error. Why?
2. is it possible to set a filter in the module configuration. For example one columne has numbers from "0" to "22" and on a page i will show only the entries with "10".
sorry for my bad english!

Hello,

1. Could you provide temporary access to your Joomla! backend by email that we can investigate this issue?
2. The module doesn't provide this ability.

Regards,
ARI Soft

For question 2: please insert this feature! I read about filter options and this was the reason to buy this module.

Hallo,
How do i use this:
Format is used that format column value. The next predefined values can be used:

* {\$value} is value of current column;

It can be used in "Columns settings -> Format" parameter. For example if you want to create link based on value from specific column and column contains ID of product, you can place the following value into "Format" textbox:

Show product

which means "Filter" YES/NO in the module configuration? what filters could i set for the table?
i need a filter in the module properties. How much do it cost to add this filter?

If you mean "Filter" parameter in "ARI Data Table" widget settings, it is used if necessary to display "Search" box on frontend. Could you explain what type of filter you need?

Re:Filter for csv-Files and iclude in content

Posted by stkurs - 2011/01/13 18:09

Thanks for reply!!!!

I need the following Feature
i import a list of 1000 adresses (csv) and then i filter these list:

i need
1. "select field to filter"

2. "select filter type" is / contains
3. "Enter filter value"

the first point is one field in the csv-file
the second point set the filter (range of data or one)
the third sets the value

For example:

1. "Name"
 2. "is"
 3. "MÑœller" and all rows with the name "mÑœller" are shown
-
1. "Name"
 2. "contains"
 3. "MÑœller" all rows with "MÑœller" and also "Bau-MÑœller", "MÑœllerheim" are shown.

i hope, my english is good enough! Sorry

We can add "like" and "equals" filters for CSV data within a week. If you need it is urgently, you can submit custom development of this feature.

Regards,
ARI Soft

New version of "ARI Data Tables" is ready. It provides ability to use "Equals" and "Contains" filters for data from CSV files. Updated version can be downloaded in "Member Area".

Hallo,
i have a new point for your software:
is it possible to show a pulldown-menu in the user-front-end? i need the following function:
i filter a csv-file with your existing tool. And on the result-page i need a pulldown-menu (1-20 free items) to select a group of the filtered addresses. Is that possible?
For the second filter i need a different field from the csv-file.
Thanks for your great WORK!
