Data file from an external source?

Posted by georgiafamily - 2011/01/18 17:38

_____

This is a fantastic plugin. Love it!

One question I have has to do with snagging the csv data from some other source than from my own site. E.g. it would make things much simpler for our current needs if we could set a read-only google docs csv file as the source. That way all we'd have to do is update our google docs file remotely and the changes will be reflected automatically on our website. Can the plugin be modified to do this?

_____

Hello,

We can adjust the module that it accepts URL to CSV file. Is it suitable for your needs?

Regards,
ARI Soft

_____

We have updated the module. New version provides ability to specify link to remote CSV file for "CSV" source type. The latest version is available in "Member Area" on our site.

Regards,
ARI Soft
