
Column Settings - Format - html

Posted by trevor_stp - 2011/02/13 02:08

When entering the example

"{\$value}"

into the format field, the html code is stripped leaving only {\$value}. Is there a plugin that must be enabled to allow for the html code?

thanks

Hello,

It was a bug under Joomla! 1.6, but we fixed it. Please download and upgrade "ARI Data Tables" module.

Regards,
ARI Soft

Thanks, works great now and it is an amazing feature!

I've never used ColorBox but I think it would be a great addition to my site. Is it possible to use the colorbox plugin for 1.6 and wrap it in the format field?

For example:

{aricolorbox}{\$value}/{aricolorbox}?

Thanks,

Trevor

It is possible to use "Colorbox" with "ARI Data Tables" if you use the following format string:

{{\$value}}

Only one problem, currently "ARI Colorbox" can work only under Joomla! 1.5. Support of Joomla! 1.6 will be added next week. If you need integration with lightbox urgently, you can use "ARI Sexy Lightbox". It supports Joomla! 1.6 right now. Format string for "ARI Sexy Lightbox" looks like:

{{\$value}}

has colorbox been updated for Joomla 1.6? I do not see it listed

thanks

i have been using a ARI color box link within the column settings of ari datatable. The color box loads when when a datatable column link is present on the first page (when ari colorbox paging enabled). If the color box link is loaded on a second, third etc page, the link opens a new page but the page is not within a colorbox.

thanks

Hello,

What table widget do you use? Is it possible to see described problem anywhere?

Regards,
ARI Soft
