## Sorting data in % form

Posted by pgarelick - 2011/02/16 22:25

---

There seems to be an issue when sorting data that is in percentage form. A negative -0.05% is less than -2.05%. Any ideas on how to fix this?

I attached a screen shot.

Thanks.

I get the same problem when sorting currency and negative currency. Is it possible to add "sort as currency" as an option for the "ARI data table"

Hello,

Download and upgrade "ARI Data Tables" module. Set "Sorting type" to "Numeric HTML" for columns with percentage or currency.

Regards,  
ARI Soft
