Show filtered data to Community Builder users
Posted by diender - 2011/02/28 14:04
_____

Hi,

Is there an possibility to show filtered data to Community Builder users (different users, differt data)?

_____

Hello,

Do you want to display data from database and use ID of logged user into SQL query or you mean something another?

Regards,
ARI Soft

_____

I want to show certain sql data to certain users. For example: user ID 2 can only see data concerning his own scores, user ID 3 etc.

_____

The module provides ability to user ID of logged user into SQL query. One note, currently it can be shown in module position or in an article.

_____

Specifically, how do I filter the data or query by logged in user? Here is what I have and it works great. However, I need to filter by logged in user. Any help will be appreciated.

Code

```
SELECT jos_facileforms_subrecords.name, jos_facileforms_subrecords.value, jos_facileforms_records.id
FROM jos_facileforms_subrecords
LEFT JOIN jos_facileforms_records ON jos_facileforms_subrecords.record = jos_facileforms_records.id
WHERE jos_facileforms_subrecords.title IN ('Project Title')
ORDER BY jos_facileforms_subrecords.id
```
----

thank you in advance for your help!

_____

Hello,

You can use {$UserId} predefined variable in SQL query. {$UserId} contains ID of logged user.

_____

Thanks for your response. However, could you give the exact code to place in my query so the data that my query is pulling will only provide it by the current user? I have tried but to no avail.

thanks

_____

Here ya go.

Code

SELECT jos_facileforms_subrecords.name, jos_facileforms_subrecords.value, jos_facileforms_records.id
FROM jos_facileforms_subrecords
LEFT JOIN jos_facileforms_records ON jos_facileforms_subrecords.record = jos_facileforms_records.id
WHERE jos_facileforms_subrecords.title IN ('Project Title')
ORDER BY jos_facileforms_subrecords.id

----

thank you in advance for your help!

_____

Provide structure of the tables, not your SQL query. We need to know what columns contains the tables.

Regards,
ARI Soft

_____

Hi,

I re-read your email requesting the structure. I have attached that information. http://www.ari-soft.com/images/fbfiles/files/Structure.zip

_____

Thank you. Use the next SQL query:

```
SELECT
  SR.name,
  SR.value,
  R.id
FROM
  #__facileforms_subrecords SR LEFT JOIN jos_facileforms_records R
   ON SR.record = R.id
WHERE
  R.user_id = {$UserId}
  AND
  SR.title IN ('Project Title')
ORDER BY
  SR.id
```

_____

Hi,

I started the thread and i'm finally ready to use ARI Data Tables for my own project. But i don't know how to connect the data to the specific Community Builder user.

I want to show all the data from jos_ezrealty where the unit_num = cb_object.

Can somebody help me out?

Thanks! http://www.ari-soft.com/images/fbfiles/images/Schermafbeelding_2011_05_19_om_16.jpg

_____

Hello,

Sorry, but could you explain what is "unit_num" and "cb_object"? It is hard to help because we don't know structure of your tables and what SQL query you use. The module provides ability to use user ID in SQL queries. Does community builder use own identifier for users or use standard Joomla! user id?

Regards,
ARI Soft

_____

Quick reply! :)

unit_num is the field where the Unit Number of properties is stored in a Realty component (see attached file for the structure. cb_object is a field i created in Community builder (see attached file).

I want to show the registred user the data of his own property. The value in field unit_num in jos_ezrealty has to correspond with the value in field cb_object in jos_comprofiler.

Thanks,

Mischa http://www.ari-soft.com/images/fbfiles/images/joscomprofiler.jpg

_____

Try to use the next SQL query:

SELECT
  R.*
FROM
  #__ezrealty R INNER JOIN #__comprofiler C
    ON R.unit_num = C.cb_object
WHERE
  C.user_id = {$UserId}

_____

Hi,

This didn't work. I now use the user id to match the desired property. This works fine! Thanks for helping.
