
Themes not working

Posted by jasonlough - 2011/05/02 21:38

Include jQuery : Yes
jQuery noconflict : Yes
Choose table type : ARI Data Table
Using jQuery UI themes : Yes

All I get is the data, nothing is styled like in the demo.

I read somewhere on this forum about JCE using an older library, so I uninstalled JCE. I have kunenea up and working, but since its not on this page in question I dont think the issue is that. Only thing that just now hits me is maybe the css files arent where theyre supposed to be, so Ill check that, but if its not that Im at a loss. :-/

Hello,

Provide link to page please where we can see the problem. It can be a conflict with a 3rd party extension.

Regards,
ARI Soft

The problem occurs because two instance of "ARI Data Tables" module are loaded on provided page. One for table and one for "No data available.". Set "ARI Data Tables -> Using jQuery UI themes" parameter to "Yes" for the second module or disable it. It should help.
