Only data without effect after upgrading JM 1.6.2

_____

Dear ARI Moderator,

When I was using Joomla 1.6.2, everything with ARI Data Tables was good. But when I upgrading to joomla 1.6.2, the ARI Data Tables on the frontend only shows statistic data with out any CSS & JS Effect.

I am not sure it is becasue the ARI Data Tables does not support JM 1.6.2, or caused by any other 3rd party plugin?

The link is here: http://www.lookerchina.com/nus/trainee.html

Thanks.

Kevin

Hello,

This problem with HighSlide extension, it causes javascript error on provided page and stops execution of "ARI Data Tables" script.

Regards,
ARI Soft
