
Data visualizer and data limitation

Posted by enricocerica - 2011/05/12 07:47

Hi,

I'm playing with the data visualizer and find it very useful. Though I have a question, I'm trying to visualize the content of a huge table and of course it's impossible to represent all the data. What I would like is to be able to split my chart into let's say 10 parts, the 9 first corresponding to the 9 higher values and the 10th corresponding to the sum of the remaining values but I can't find any way to achieve that.

Any suggestion ?

By the way this would be a great function.

=====

Hello,

Sorry, but currently it is impossible to split chart for one table. We will think about implementation this ability in a future release. Thank you for your suggestion.

Regards,
ARI Soft
