Undefined Widget error?
Posted by pot1906dk - 2011/05/14 11:28
_____

Hi, I just bought ARI Data Tables.

To try it out on my own computer (Win7, Apache) I created a list of all aritcles. It works great, except that, right above the table, i get this :

"Notice: Undefined index: widget in C:\www\3015\www\modules\mod_aridatatables\mod_aridatatables.php on line 43"

I haven't got a clue what this is about. Anyone else with this problem - and a solution? :huh:

Thanks.

Hello,

Download extension's package again and upgrade "ARI Data Tables" module please. It should help.

Regards,
ARI Soft
