## error in class.CSVParser.php

Posted by cw2323 - 2011/05/15 16:22

---

Hi

Overall the extension is working however on a few I am getting the following error:

Warning: fread() : Length parameter must be greater than 0 in /home/-removed-path-/public\_html/modules/mod\_aridatatables/includes/kernel/CSV/class.CSVParser.php on line 714

No data available.

The line 'No data available.' is normally displayed when a csv file is empty - could it be these are empty and corrupted or do I need to adjust something in the class.CSVParser.php?

Any help would be great.

Thanks,  
chris

Hello,

Check that CSV file has readable permissions. If it has readable permissions and error occurs, could you provide your CSV file or temporary access to your Joomla! backend by email that we can investigate the problem?

Regards,  
ARI Soft

Hi

I think the csv file was not set to be readable as you say. I opened each one and resaved as is then uploaded. The error has now disappeared.

Thanks for your reply,  
chris
