
Shows in module position but not in article

Posted by starcastle - 2011/05/20 16:17

Both module and plugin are installed and enabled.

In the module settings, I can choose a position to show the module.

Since I don't want it to show up in a module but in articles, I have no idea what to choose.

And what about menus? All, None or menus I specify?

I can get the table to show up in any position I choose, just not inside articles.

I have put {aridatatables moduleId=""}, where XX is the module number as a text line in a test article.

This is all I get

http://www.silken.windhound.com/index.php?option=com_content&view=article&id=95:testing&catid=37:klubben&Itemid=91

I simply don't get it...

Help!

Hello,

Enable "ARI Data Tables" module and set "Menus:" parameter to "None". If "ARI Data Tables" module has ID parameter equals to 46, place the next code into an article that load the module:

```
{aridatatables moduleId="46"}{/aridatatables}
```

It seems you a WYSIWYG editor and it encode plugin code. You can see it if open HTML source of the page. Switch editor to plain text mode and enter plugin code.

Yay! That worked! Thanks!

Now I have a lot of styling to do, could not see before what it would look like :-)

I'm having the same problem, but it doesn't seem to be possible to submit the article without formatting - every time I re-submit, the article reapplies paragraph tags.

Do you have a similar step-by-step process for Joomla 1.5, because the interface is significantly different.

Could you specify what code you entered and what code is appeared after saving an article?

Blah, yeah, stupid me. Ignore the page - the code I pasted is what is being displayed.
