copy of aridatatable
Posted by ngkarsin - 2011/05/25 07:22

_____

Hi,
I copy my original aridatatable which is originally working fine(moduleid=60) .

After the copy and changing the sql query, i try to display in the same page which it hosts moduleid =60, the new copied one is moduleid=61

To my surprise, it display a totally empty page. Any idea what is happening?

_____

Hello,

Check that copy of the module is enabled and SQL query is correct. You can also provide temporary access to your Joomla! backend by email and we will investigate the problem in more details.

_____

Set "SQL -> Debug" parameter to "Yes" and provide your SQL query please.

_____

You can use PHP Settings plugin that increase "memory_limit" PHP parameter or split your table into several tables that it contains less records.
