## Newbie Q

Posted by jadamowsky - 2011/06/01 17:28

---

I have a CSV file on the server csv/HPA.csv

I cannot figure out how to get the module to see it....

Please advise...this is really not very easy to use.

Hello,

If necessary CSV file is located by the next path /csv/HPA.csv , select "CSV" in "Choose source type" drop-down and enter csv/HPA.csv in "CSV -> Path to CSV file" parameter. If something doesn't work, provide link to page where we can see a problem and screenshot of module settings page or temporary access to your Joomla! backend by email that we can investigate it.

Sure:

<http://74.127.47.240/~newadven/cms/index.php/blog>

and the csv is at:

<http://74.127.47.240/~newadven/cms/csv/hpa.csv>

Sorry, but "CSV -> Path to CSV file" parameter is empty. This parameter should contains path to CSV file, in your case it is csv/hpa.csv value. Otherwise the module can show nothing because data source is not specified.
