TinyTable jQuery error? Huh?

Posted by Eric_S - 2011/06/07 06:16
_____

Trying to load Plain HTML table and use TinyTable.

Include MooTools No
Include jQuery No
jQuery noConflict No
jQuery UI Theme aristo
Show loading pane No
Loading message Loading data...
Advanced styling No

Still I get these errors:

Uncaught ReferenceError: jQuery is not defined
(anonymous function)/modules/mod_aridatatables/includes/assets/common.js:1
Uncaught TypeError: Cannot call method 'hasChildNodes' of undefined
j.wk:1
j.init.a:1
j.init:1
jdv_iscroll67_current47-emd-parts.html:43
returnsmootools.js:21
(anonymous function)mootools.js:21
(anonymous function)mootools.js:50
Element.Methods.Events.fireEventmootools.js:50
srcmootools.js:59
srcmootools.js:59
returns

Don't know why it's trying to load jQuery. Seems like it shouldn't.

Any help would be greatly appreciated.

Hello,

Download and upgrade "ARI Data Tables" module. It should help.

Regards,
ARI Soft

Thanks. That took care of the jQuery error but I atill have this one:

Uncaught TypeError: Cannot call method 'hasChildNodes' of undefined

_____

Could you provide link to page where we can see the problem or send code of HTML table which you use by email?

Regards,
ARI Soft

_____

This makes it work...The "Default sorting column" field has no default value but it must have a valid numeric value.

However, I still get this error:

Uncaught ReferenceError: AriDataTables is not defined
jdv_iscroll67_current
returns
(anonymous function)
(anonymous function)
Element.Methods.Events.fireEvent
src
src
returns

_____

Download and upgrade "ARI Data Tables" module again please.

PS: Sorry for inconvenience.

Regards,
ARI Soft
