
Page turns white! - Table Sorter

Posted by Eric_S - 2011/06/12 16:51

Hello,

I am using ARI Table Sorter with paging. I have the paging parameters set to 10,25,50,100,500. When paging, everything works fine except when going from 500 down to any lower value. The whole page goes completely blank white.

When the page loads the following error occurs:

```
Uncaught ReferenceError: AriDataTables is not defined
jdv_iscroll67_current
o.extend.ready.o.readyList
o.extend.each
o.extend.ready
o.each.o.fn
```

Thanks.

Hello,

About javascript error, download "ARI Data Tables" module and upgrade it on your site. It should help.

About white space, we have tried to reproduce it in FireFox 3-4 and in Google Chrome and it works fine.

Regards,
ARI Soft

Tried again twice. The first worked, the second went all white.

Sorry, we have reproduced it. This problem with tooltip on the page. Add the next CSS rule that fix it:

```
.tool-tip
{
display: none;
}
```

Regards,
ARI Soft
