
Editing displayed values in the grid/table

Posted by yositsitsu - 2011/07/04 19:09

Hi,

I have a requirement to be able to edit displayed data from the frontend - is it possible to update values in the displayed table or add new values:

1. to an existing column
2. to a new column that is created on the fly

Sort of a very simple CRM.

For example, say I have a table of customers:

name
surname
email
phone
address
occupation
remarks

Only the first four are mandatory - all the rest are nillable and can be updated at any time - hopefully from the frontend.

Thanks!

Yosi
