
include joomla plugin in table column

Posted by chocochipz - 2011/07/13 10:19

Hi,

Is it possible to include joomla plugin in column? I tried to include 1Pixelout Audio Player plugin on my column, but the results is still in text mode not the audio player. Here's what i mean :

Column 1 // Column 2

Songs // Listen

Track 1 // {audio}path-to-mp3{audio}

Is there any solution for this because the plugin works normally outside the table ?

Hello,

Do you show "ARI Data Tables" module in an article or in module position? Is "1Pixelout Audio Player" Joomla! content plugin or not?

thank you for your fast reply

i tried both in module position and include / show module in an article.

yes, 1Pixelout Audio Player is Joomla! content plugin. You can find the plugins here
<http://extensions.joomla.org/extensions/multimedia/multimedia-players/audio-players-a-gallery/4197>

Could you provide your order number, link to page where we can see the problem and temporary access to your J! backend that we can investigate the issue by email?

Regards,
ARI Soft
