
Data Table - Images with csv

Posted by greenday018 - 2011/07/18 23:34

Hi there,

i just bought the data table module and im trying to figure out how to add pictures in my table, im filling it with csv and got some small pics on my root.

is there any command? i tried to make the collum a html type but it didnt really work..

looking forward to your suggestion :-)

greetz

Hello,

Could you specify in what format images are saved in CSV file (path to image, HTML code)?

Regards,
ARI Soft

Hi

Did you figure out how to do this? I'm also interested in this functionality :-)

Dear all,

I am also wondering how to display images using a csv file. My csv looks like this:

Bild,Name,PLZ und Ort
images/bilder/lehrer/picture.jpg,Name,zip and town

It works but the image is not displayed.

Can you support me doing this?

Hello,

Could you send your CSV file and screenshot of module settings page by email?

Regards,
ARI Soft

Are the double quotes necessary?

=====

Re:Data Table - Images with csv

Posted by admin - 2011/08/31 21:18

Hello,

Double quotes is necessary if column values in a CSV file are quoted. We can provide exact answer, what code to use in your case if you send your CSV file by email.

I was struggling with this, and did email Tech support, but figured out what I did wrong and wanted to share...

If you want to have an image pop-up using the sexy lightbox, in a column in your csv file, enter:

/images/./imagename.gif or you may have to use the quotes
"/images/./imagename.gif" depending on how you are outputting your csv file

In the Data Tables module, the format for the column that contains your link should be entered in the Format column as:

{ \$value }

GREAT software!

:cheer:

Hello,

Are link to original images and thumbnails stored in your CSV file?

Regards,
ARI Soft

thanks.

I used your format instruction , to show an original image on the table , it works !. I now want to use this picture as an article link.

I used this format help -

can it be done ?

(look for syringa chinensis search on ari table in <http://www.ginatnoy.co.il/index.php/he/component/content/article/89-main-category/564-test>)

If you want to link all images to the same article, use the next code:

where ARTICLE_ID is ID of an article which you want to show. For example if ID equals 17, use the next code:

Hello and thanks for the quick reply.

It works. Of course, but -

1. I found no way to change the setting of image size in format order .
2. I understand from your answer, that it is not possible to link each image separately or a separate link for another article. So i need to create two columns, one picture and one link.

And to my question -

1/ Is this true that the separation of links can not be made independent or there is a way ?

2/ Is there a way to resize the displayed image?

Thank you for your service and answer quickly. They justified their reputation of your company.

Ariel

1. You can use "width" and "height" attribute of "IMG" tag to change an image size.

2. It is possible to link images to different articles, but it requires to store article ID in separate column in a CSV file.

Posted by catarinacat - 2012/07/13 08:39

hi,

format:png

I have managed to get the images, but appears the " between the image and the text.

link to ari tables:

<http://estampaki.com/sub17/index.php/31-campeonato-europeu/fase-de-grupos>
