
Guide to setup ARI Data Table

Posted by xega - 2011/07/19 11:02

Hi

Do you have a guide on how to setup a table such as the "ARI Data Table" in your demo? Which parameters to set and so on?

Thanks!

Hello,

Documentation can be found in "Description" field on module settings page. In brief, choose source type and enter path to CSV file (if you use CSV source type) or "SELECT" SQL query (if you use database as source type). After this choose appropriate table widget in "Choose table type" parameter.

I've tried that but I've been unable to get the "Show x entries" part as well as the search box up and running. And my filtering doesn't work either unfortunately :-/

I have a suggestion for upcoming versions - to make each configuration point collapsable - would save a lot of scrolling up and down :-)

If I use "Ari Table Sorter" the sorting works...

Please take a look at <http://hafdal.dk/index.php/type1> - I can't get this to work :-/

Hi again! Finally got it working. After changing from a locally stored csv file to a google spreadsheet, everything suddenly worked. Dunno what was wrong?

Hello,

Probably you have entered incorrect path to CSV file. Could you specify what path to local CSV file did you enter?

Hi

I made it match the example you gave in the guide, maybe the file upload was corrupt?

I have another question though. In my case the table I want to display has 14 columns. The last column is very often empty. Now lets say IÖ'm browsing through the rows, 10 at a time. Whenever I get 10 rows in a row that do not contain data in the final column, the column header is missing. If I press to view the next 10 and now there is data in the final column, the column heading is visible again.

Any idea what could be the issue?

LOL - I think I must be going crazy - it's working now! However the formatting of the lines (blue/white) does not include the empty rows. So I guess that's the problem now.

Sorry, but provided page is not available. It shows Joomla! installer page.

PS: Could you provide your CSV file by email?

Regards,
ARI Soft

My site is up and running again now - see this <http://hafdal.dk/index.php/kirkegarde>

I'm still having an issue with the last column formatting if the cell is empty.

The problem with CSV file. It doesn't contain column if last column has empty value.

Hi! Just un-installed and re-installed all 3 components of the Ari Data Table and everything looks perfect now!
Thanks so much for your help :-)

Now that I've purchased ARI Data Table, how long can I get updated versions of the components?

Thanks again! :cheer:

Re:Guide to setup ARI Data Table

Posted by xega - 2011/07/21 17:14

I just keep going ;-). I have another question regarding the sorting of a date. I've selected the column number and set the sorting type as date - but some of my dates are only a year, that is, I only know the persons birth year. So either I write only the year, f.ex. 1864 or 00-00-1864, but none of the methods gets sorted correctly. Do you have some recommendations on how I should write the date?

I'm still having this issue, on all pages where I use the tables. Here's two examples:
<http://hafdal.dk/index.php/kirkegarde/kegnaes-kirkegard>
<http://hafdal.dk/index.php/kirkegarde/svenstrup-kirkegard>

It seems the problem with CSV file. It doesn't contain header columns for two last column.

Posted by xega - 2011/07/26 12:48

Ok thanks! I managed to fix that by just putting a . in the last column, instead of it being completely empty.
