
Little question for arisqltablequery

Posted by gsorel - 2011/07/20 04:00

what is inputEncoding
headCellTag
cellTag
virtual

Thanks!

Hello,

Do you use "ARI Smart Content" or "ARI Data Tables" extension?

Regards,
ARI Soft

"ARI Smart Content" or "ARI Data Tables"

I buy either!

I use smart content ...

Ah)) if i want change the css of table ... i make a css with dreamweaver and ... where i can put the file.css??

"inputEncoding" attribute is used if data is loaded from external database that specify encoding of data.

"headCellTag" attribute is used to specify HTML tag which will be used for header columns (TD or TH tag, by default TH is used).

"cellTag" attribute is used to specify HTML tag for data column (TD or TH tag, by default TD is used).

"virtual" attribute is used if you want to create virtual column.

Custom CSS styles can be added to "CSS Template" (See "CSS Templates" page on component backend).

Regards,
ARI Soft
