
Upgrade Joomla 1.6.5 -> Joomla 1.7

Posted by fertrob - 2011/07/23 12:24

I updated my site form 1.65 to 1.7. Now the site crashed because on my frontpage i haven an article with a aritablemodule.

The error i get is:

Fatal error: Cannot instantiate abstract class JDatabaseQuery in
/home/mydomain/public_html/joomla/plugins/content/aridatatables/aridatatables/kernel/Module/j16/class.ModuleHelper.php on line 41

Please can you help me.

Yes! IÒ've the same problem after upgrading from 1.6.5 to 1.7:
Aridatatables doesnÒ't work anymore:

First there is a message:

Fatal error: Cannot instantiate abstract class JDatabaseQuery in
/is/htdocs/wp10668766_NV8TR4V16V/www/modules/mod_arisexylightbox/includes/kernel/Module/j16/class.ModuleHelper.php on line 41

after deactivating sexylightbox thereÒ's the following message:

Fatal error: Cannot instantiate abstract class JDatabaseQuery in
/is/htdocs/wp10668766_NV8TR4V16V/www/plugins/content/aridatatables/aridatatables/kernel/Module/j16/class.ModuleHelper.php on line 41

hmmm ... need some help too ... :(

Here we go!

The Problem is a compatibility issue with JDatabaseQuery in Joomla 1.7 (look: http://groups.google.com/group/joomla-dev-general/browse_thread/thread/5f18d884338e647a.)

HereÒ's the solution for Sexylightbox:

In file /modules/mod_arisexylightbox/includes/kernel/Module/j16/class.ModuleHelper.php on line 41
replace \$query = new JDatabaseQuery;
with \$query = \$db->getQuery(true);

and here for AriDataTables:

In file /plugins/content/aridatatables/kernel/Module/j16/class.ModuleHelper.php on line 41
replace \$query = new JDatabaseQuery;
with \$query = \$db->getQuery(true);

:woohoo:

Hello,

The latest version of "ARI Data Tables" and "ARI Sexy Lightbox" support Joomla! 1.7. Just download it from "Member Area" on our site and upgrade.

Regards,
ARI Soft

Today has been updated to 1.7 the same problem.

questions:

1. As not breaking the site easy to update the component?
 2. In the membership area I have available to ARI Data Tables v. 05/01/26 although the description does not say that the component is compatible with 1.7, and in the readme.txt file is not written how to update a component only describes the installation process, but I do not want to redo again from scratch the table.

Download the latest of the extension from "Member Area" and upgrade "ARI Data Tables" module and plugin (if you use it). For this install new version of the module (the plugin) through standard Joomla! installation page over installed extension. Joomla! installer upgrade all necessary files.

Regards,
ARI Soft

Thank you all running. The only pity is that too meager description on the website that in the readme.txt file so raises questions
