How to install ARI Data Tables on Joomla 1.7
Posted by canberraweb - 2011/08/04 04:59

_____

I have just purchased ARI Data tables and was trying to install the .zip though the extensions manager as I have done so 100's times..

I am getting this error:

Fatal error: Call to undefined method JAdministrator::getSiteURL() in /home/capitalp/public_html/administrator/components/com_arismartcontent/kernel/Joomla/class.JoomlaBridge.php on line 9

I have read articles on updating, but when I click on Members Area, it only shows the 1 data tables product, which gets the above error. I can't see any different releases to get.

Thanks, Shaun.

_____

Hello,

Sorry, but you bought "ARI Smart Content", it is not the same as "ARI Data Tables" extension. "ARI Smart Content" is not yet compatible with J! 1.7.

PS: You can contact us by email and we can change "ARI Smart Content" with "ARI Data Tables" extension.

Regards,
ARI Soft
